Nature's Treasure

Waterfalls in Nature

Combining earth, stone, running water and gravity – waterfalls are one of nature's most stunning and enchanting features. The most impressive of these waterfalls often cascade over large boulders. While waterfalls are often found far from civilization, people have tried to build homes on landscapes that incorporate naturally occurring waterfalls for generations.

Waterfalls in your Backyard

Man made waterfalls are a great way to bring one of nature's greatest treasures into your backyard. Boulder Waterfalls add sound, motion and vitality to your landscape – all while increasing the value of your property. The ClifRock Panel System allows homeowners to build a remarkably realistic boulder waterfall efficiently, economically and with minimal property disruption.

Types of Water Features

Pond – there are several types of ponds, from water gardens to koi ponds. Typical construction is either poured concrete or

Pond-less water features typically have a stone base with an underground catch basin

Pool water features commonly tap into filtration system and recirculate pool water through pump

Running Boulder – Typically smaller features with one or two boulders. Ideal for patio water features, koi ponds and pondless water features.

Cascading Boulders -

Multiple boulders designed to have water descend over a series of boulders. Cascading Boulder Waterfalls are great for large water features, ponds and pools.

Ledge Waterfall –

Characterized by water that descends vertically, making little to no contact with rock structure. Ledge waterfall offers a more intense sound, great for commercial features.

Boulder Mountain

Waterfall – Large panel rock structure that may have a series of waterfalls one after another that will eventually plunge into a large pond or pool. Commonly a pool water slide or cave/grotto feature will be built into a Boulder Mountain Waterfall.
